FLEXFOIL METALIZED POLYESTER BUBBLE LAMINATE IS A TRI-LAYER PRODUCT CONSISTING OF A LAYER OF METALIZED POLYESTER, A SINGLE LAYER OF BUBBLE AND A WHITE POLYETHYLENE BACKING SHEET. (ALSO AVAILABLE: FOAM INNER)

KEY FEATURES

FEATURES

Metalized Surface

Flexible material

Lightweight

Bubble layer

ADVANTAGE

Insulative properties

Will bend and fold

Easy to work with

Cushions packaged product

BENEFITS

Keeps contents cold

Can form to the shape of a carton

Low shipping cost

Contents are protected from damage

Metalized features a surface with insulative properties that keeps contents cold. It is a flexible material so it will bend and fold to form to the shape of a carton. Metalized is lightweight and easy to use and its bubble layer cushions packaged product, protecting from damage. Used in a shipper, radiant heat from external sources is reflected away, not absorbed like regular pouches.

TARGET MARKETS

Target markets include: Perishable Foods, Recreational Vehicles, Housing/Cottages, Pharmaceutical, Plumbing Industry.
